

LHOIST NORTH AMERICA

eLearning Case Study

Lhoist North America engages in extracting, manufacturing, and marketing lime-based products. Its products include high-calcium and dolomitic limestone products, quicklimes, blended quicklimes, hydrated limes, and lime slurries. Lhoist products are used in steel, construction, environmental/flue gas desulfurization, metal and mining, municipal, and pulp and paper markets.

As industrialists, Lhoist devotes all talents and efforts ensuring continued expansion, guided by a sustained research and investment policy and strong technological progress. The company has plant locations in Nevada, Texas, Utah, California, Arizona, Alabama, Virginia, Kentucky, Missouri, Idaho, Washington, New Mexico, Florida, Louisiana, West Virginia, South Carolina and Illinois, as well as in Canada.

The Organization

Lhoist North America

Location: Fort Worth, TX

Services Provided: Production of lime and lime-based products

Number of Employees: 1,600

Contact: Kristen Gallo, Human Resources Administrator
Mike Staggs, Training and Learning Manager

The Challenge

Lhoist North America required a system that would deliver consistent training from any browser, anywhere, anytime. In addition, the organization needed to have the ability to track mandated compliance training easily.

At Lhoist, most operations run twenty-four hours, seven days a week making it difficult to allocate time for training. Less than half of the employees use a company email, therefore consistent communication was also challenging.

With over 50 locations across the United States and many of them located in remote areas, the company wanted to reduce the need for instructors to travel to these multiple locations.

Employee training requirements for this Mining & Manufacturing industry organization are diverse. A majority of the employees must meet MSHA training. Others must comply with OSHA and DOT requirements. In addition, many of their employees require technical and specialized training.

The Solution

Lhoist chose the DuPont™ eLearning Suite to satisfy its need for an e-learning training platform. The suite provides the majority of its staff the opportunity to participate in a variety of online training courses. The suite delivers the capability to accurately track training hours and provide task training in leadership communication, safety, environment, mechanical, electrical, and operator functions.

Lhoist North America eLearning Case Study

The Result

“The DuPont™ eLearning Suite has given our employees the flexibility to complete training at their convenience. Since they can stop and then pick up where they left off, it helps them fit training in between other job activities. Our qualified instructors use it to enhance the safety program.

It is a developmental tool for our employees who desire to learn more about their field or function. Additionally, we utilized the custom course creation feature to build a course that is a part of our on boarding process.”

Mike Staggs
 Training and Learning Manager
 Lhoist North America
 Fort Worth, TX

In addition, this solution has provided the organization with:

- Support to maintain the Lhoist North America learning and development objectives
- Flexibility in scheduling and conducting training
- A convenient platform to deliver training
- A vehicle for easily creating custom courses.

Major benefits to the organization:

1. Provided a reduced cost per hour training solution.
2. Consistent training content; each employee is exposed to identical material and test scores can be evaluated to demonstrate that learning occurred.
3. The company tracks cost, training hours, and training headcounts. Lhoist has experienced a reduction in travel expenses for remote employees who take their training courses online.

The organization has seen an increase in online training courses being requested and the learning solution has been embraced.
